WEBSITE MIGRATION SERVICE

Professional • Secure • Smooth Website Transfer

Move Your Website to a New Hosting Provider with Confidence

Need to move your website to a new hosting account, server, or domain? I can help transfer your website files, databases, and essential settings carefully to your new hosting environment. My goal is to make the migration smooth and reduce downtime.

What My Website Migration Service Includes

- Website files and folder transfer
- MySQL database backup and migration
- WordPress website migration
- Domain and DNS configuration guidance
- Email migration assistance, where supported
- SSL certificate and HTTPS checks
- Website testing after migration

Why Choose This Service?

- Careful handling of website files and databases
- Clear communication throughout the process
- Post-migration checks for pages, links, and basic functionality
- A migration plan based on your website and hosting setup

What I Need from You

- Current hosting access or a full website backup
- New hosting account details
- Domain/DNS access if DNS changes are required
- A short description of your website and any special requirements

Important Notes

A successful migration depends on the source website, hosting environment, DNS settings, and access permissions. Some email services, custom applications, or server configurations may require additional work. Please keep a recent backup before migration. No service can guarantee zero downtime or zero data loss in every situation, but careful planning, backups, and testing help reduce the risk.

LET'S MOVE YOUR WEBSITE

Send your website details to get started.
